

## C0. Introduction

### C0.1

#### (C0.1) Give a general description and introduction to your organization.

Akcansa joint venture of Sabancı Holding and HeidelbergCement is the biggest cement producer of Turkey, and leader company of the industry. Akcansa was established with the merger of Akçimento (established in 1967) and Çanakkale Çimento (established in 1974) in 1996. Active in the Marmara, Aegean and Black Sea Regions, Akçansa produces cement and clinker in its three factories located in İstanbul-Büyükçekmece, Çanakkale and Samsun-Ladik. The Company also has five cement terminals. Akcansa provides service under the "Betonasa" brand to produce and sell ready-mixed concrete in over 35 plants throughout the Marmara and Aegean regions, and aggregate under the "Agregasa" brand in its 4 aggregate plants.

As the leader of the Turkish cement industry, Akçansa supplies 10% of our country's cement demand and 12,5% of the country's total cement and clinker exports. In addition to being identified as an environmentally friendly company with the award given by the Istanbul Chamber of Commerce, the Company maintains its leadership position through its outstanding service approach and its facilities that are equipped with the latest technology.

#### Sustainability strategy :

Akcansa vision is to maintain sustainable growth beyond all limits in the building materials industry and to be trusted by all our stakeholders and to have the most preferred business model. The mission is to create value for our customers through the use of our innovative products, services and solutions, our stakeholders with our outstanding financial performance, our employees who form the focus point of our business model by providing constant improvement opportunities through our culture that is committed to upholding social, environmental, legal and ethical values.

The Board of Directors and the Executive Committee is highly engaged in sustainability policy and Akcansa 2020 Sustainability ambitions focused on 6 pillars defined with the guidance of World Business Council for Sustainable Development (WBCSD) Cement Sustainability Initiative (CSI) key actions and our local stakeholder priorities. These pillars are namely occupational health and safety, sustainable supply chain management, promoting biodiversity, protecting the climate and the environment, sustainable construction and stakeholder engagement. We have defined precise targets for these pillars in the Akcansa Sustainability Ambitions, which we intend to achieve by 2020.

#### Sustainability management:

Akcansa Sustainability Committee, directly reporting to the Executive Committee and indirectly to the Board of Directors, led by the Technical Director (member of Executive Committee) is in charge of the management and control of the sustainability and climate protection strategy. The committee is made up of people from various business lines and disciplines: Health&Safety, Purchasing, Raw materials&Environment, R&D, Communication and Human Resources. Operational responsibility for implementing the sustainability and climate protection goals and measures lies with the individual departments, the line managers and the employees. It was set up in 2009 with the aim of improving our performance in environmental protection and occupational safety and promoting the information between the business lines. Due to the large quantities of fuel used during the cement manufacturing process and the release of carbon dioxide from the raw materials, cement production generates more carbon emissions than any other industrial process. That is why climate protection is at the heart of our environmental policy. We have been striving for many years to minimise our CO2 emissions. Akcansa target is to reduce specific net CO2 emissions down to 830 kgCO2/ton clinker by 2020.

For further information about the company and its organization, please visit [www.akcansa.com.tr](http://www.akcansa.com.tr) and see 2017 annual report.

### C0.2

#### (C0.2) State the start and end date of the year for which you are reporting data.

	Start date	End date	Indicate if you are providing emissions data for past reporting years	Select the number of past reporting years you will be providing emissions data for
Row 1	January 1 2017	December 31 2017	No	<Not Applicable>
Row 2	<Not Applicable>	<Not Applicable>	<Not Applicable>	<Not Applicable>
Row 3	<Not Applicable>	<Not Applicable>	<Not Applicable>	<Not Applicable>
Row 4	<Not Applicable>	<Not Applicable>	<Not Applicable>	<Not Applicable>

### C0.3

#### (C0.3) Select the countries/regions for which you will be supplying data.

Turkey

### C0.4

#### (C0.4) Select the currency used for all financial information disclosed throughout your response.

TRY

C0.5

**(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your consolidation approach to your Scope 1 and Scope 2 greenhouse gas inventory.**

Operational control

C-CE0.7

**(C-CE0.7) Which part of the concrete value chain does your organization operate in?**

- Limestone quarrying
- Clinker production
- Portland cement manufacturing
- Blended cement
- Alternative 'low CO2' cementitious materials production
- Aggregates production
- Concrete production

C1. Governance

C1.1

**(C1.1) Is there board-level oversight of climate-related issues within your organization?**

Yes

C1.1a

**(C1.1a) Identify the position(s) of the individual(s) on the board with responsibility for climate-related issues.**

Position of individual(s)	Please explain
Board/Executive board	Akcansa Chairman of the Board and Vice Chairman are the highest level individuals with direct responsibility for all issues relating to environmental sustainability and climate change. The Chairman is informed by Akcansa General Manager about the progress on sustainability actions of Akcansa. The developments are periodically tracked by the Sustainability Committee and the chairman of the committee (Asst. GM – Operations) informs GM. Besides emission and water data has been provided to OCR reports for group reporting of HeidelbergCement. Vice chairman is briefed on the developments on emissions reductions in the Group level by the Director of Global Environmental Sustainability Department. As far as climate change is concerned, Vice chairman is responsible to review the progress and status of Green House Gas emissions reduction at HeidelbergCement. He is informed by the Group CO2 Coordinator who is assisted by CO2 coordinator

C1.1b

**(C1.1b) Provide further details on the board’s oversight of climate-related issues.**

Frequency with which climate-related issues are a scheduled agenda item	Governance mechanisms into which climate-related issues are integrated	Please explain
Scheduled – some meetings	Reviewing and guiding strategy Reviewing and guiding major plans of action Reviewing and guiding business plans Overseeing major capital expenditures, acquisitions and divestitures	Managing board reviews risks on regular basis. Transition to low carbon economy is a strategical issue. Due to upcoming regulative probable changes for which the key actions are increasing alternative fuel rate and alternative fuel investments.

C1.2

**(C1.2) Below board-level, provide the highest-level management position(s) or committee(s) with responsibility for climate-related issues.**

Name of the position(s) and/or committee(s)	Responsibility	Frequency of reporting to the board on climate-related issues
Chief Executive Officer (CEO)	Both assessing and managing climate-related risks and opportunities	Half-yearly
Sustainability committee	Both assessing and managing climate-related risks and opportunities	Half-yearly

C1.2a

**(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored.**

The corporate sustainability policy of Akçansa is implemented according to the objectives set in HeidelbergCement's Sustainability Ambitions 2020 that encompasses all its subsidiaries. The annual practices and performance measurement of the company according to Sustainability Ambitions 2020 are conducted by Akçansa Sustainability Committee. The Sustainability Committee reports the practices realized, performance results obtained, performance improvements achieved in materiality issues to the Executive Board directly and to the Board of Directors by means of risk reports.

A Sustainability Workgroup was organized in order to identify the sustainability priorities of Akçansa. Data collected by the Sustainability Committee through channels such as surveys and researches, satisfaction surveys, workgroup studies, OHS Committees, marketing communication works, competitions, Bridge Days, Neighbour Councils, Sustainability Ambitions 2020 and local and international risks and opportunities were evaluated to determine the priority issues. Sustainability priorities were addressed within the scope of the processes of raw material production, procurement, cement and ready-mixed concrete production, logistics, and sales & marketing, which are the five links forming the value chain Committee.

Akçansa Sustainability Committee is composed of the members of thematic workgroups formed in parallel with strategic targets, communication manager, and coordinator. The committee has been directed by assistant general manager of operation function who is member of Akçansa Executive Board. One of these thematic Workgroups is "Climate and Environmental Protection". 2020 target related

**C1.3**

**(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?**

Yes

**C1.3a**

**(C1.3a) Provide further details on the incentives provided for the management of climate-related issues.**

**Who is entitled to benefit from these incentives?**

All employees

**Types of incentives**

Monetary reward

**Activity incentivized**

Efficiency target

**Comment**

Executive Committee Members, business unit managers and engineers receive monetary reward if they achieve their industrial and operational performance objectives according to the company CO2 reduction related targets such as clinker/cement substitution rate, use of alternative fuels rate, and energy efficiency.

**Who is entitled to benefit from these incentives?**

Board/Executive board

**Types of incentives**

Monetary reward

**Activity incentivized**

Emissions reduction target

**Comment**

Board Members and Executive Committee Members monetary reward if the overall performance of the Group CO2 related targets are achieved.

**C2. Risks and opportunities**

**C2.1**

**(C2.1) Describe what your organization considers to be short-, medium- and long-term horizons.**

	From (years)	To (years)	Comment
Short-term	0	3	To comply with the current regulations, determine the company's 2030 sustainability goals
Medium-term	3	5	Identify the roadmap for the company's sustainability objectives and initiate the necessary actions
Long-term	5	10	Ensure the company's sustainability goals

**C2.2**

**(C2.2) Select the option that best describes how your organization's processes for identifying, assessing, and managing climate-related issues are integrated into your overall risk management.**

Integrated into multi-disciplinary company-wide risk identification, assessment, and management processes

**C2.2a**

**(C2.2a) Select the options that best describe your organization's frequency and time horizon for identifying and assessing climate-related risks.**

	Frequency of monitoring	How far into the future are risks considered?	Comment
Row 1	Six-monthly or more frequently	>6 years	Akcansa's solution strategies for the global climate change are shaped by the Corporate Governance Committee that directly reports to our Board of Directors. As a Heidelberg Cement group company, in Akcansa, risk reports for all business lines are presented to the Group Managing Board on a quarterly basis within the framework of central management reporting to ensure that risks are monitored in a structured and continuous way. Correlations between individual risks and events are considered at local level as far as possible. The process of regular identification is supplemented with an ad-hoc risk report in the event of the sudden occurrence of serious risks or of sudden damage caused. HC Supervisory Board and its Audit Committee also review the effectiveness of the risk management system on a regular basis. In addition, Compliance universe, Sabancı Holding's risk-based management approach, defines our environmental risks and our risks are revised in 6-month periods

**C2.2b**

**(C2.2b) Provide further details on your organization's process(es) for identifying and assessing climate-related risks.**

Akcansa risk strategy on climate change is shaped by the Corporate Governance Committee directly reporting to the Board of Directors. Operations, energy procurement, environment, H&S, risk departments in line with sustainability ambitions ensure an effective coordination. In 2014 Akcansa implemented a new framework to evaluate its all risks. Akcansa invest to keep environmental effects minimum, energy investments are done; fossil fuels are replaced with AFR. Insurance program covers all environmental effects and pollutions.

Akcansa risk policy is based on safeguarding the Group's existence and sustainably increasing its value. The Group's risk catalogue considers financial, strategic, operational, as well as legal and compliance risks. Opportunity and risk management is closely linked by Group-wide planning and monitoring systems. Opportunities are recorded in the annual operational plan and followed in monthly financial reporting. Risk identification is performed regularly by the country management and by Group Internal Audit and Group Insurance&Corporate Risk Department. Correlations between individual risks and events are considered at asset level as far as possible.

Group's risk is assessed via the consolidated examination of all major compound and individual risks by the Managing Board, supported by the Group Insurance&Corporate Risk Department. Risk reports for all business lines are presented to the Managing Board on a quarterly basis. It is supplemented with an ad-hoc risk report on asset and company level in the event of the sudden occurrence of serious risks or of sudden damage caused. The Group Insurance& Corporate Risk Department is responsible for coordinating the risk management processes. It summarizes all significant quantitative and qualitative risks for assets/plants, countries and Group functions on a quarterly basis in a central risk map. The Group Internal Audit Department examines risk management to increase risk awareness

**C2.2c**

**(C2.2c) Which of the following risk types are considered in your organization's climate-related risk assessments?**

	Relevance & inclusion	Please explain
Current regulation	Relevant, always included	"Compliance with Regulations" comes at the top of our risk assessment. - Akçansa "Compliance Universe" - We manage our compliance risk through our risk-opportunity evaluations and our follow-up tables within the scope of the Environmental Management System. Within the scope of the Regulation on Greenhouse Gas Emissions, we prepare reports every year and submit improvement reports. Which are validated by third party accredited firm All regulations related to the environment in turkey is followed by the environment department.
Emerging regulation	Relevant, always included	-Environmental regulations all around the world require higher compliance. In this context, it is a significant risk not to prepare these new requirements. -The risk minimization is also supported with policy engagement activities. E.g. actively participates in the PMR Turkey (Partnership for Market Readiness) Project. Specifically, Turkey seeks the PMR's help in realizing its vision for market-based mechanisms to mitigate GHG. -We are in constant communication with our professional associations to manage this risk. We are working on and preparing for these changes by participating in working groups on environment and climate.
Technology	Not evaluated	Not yet evaluated
Legal	Not evaluated	Not yet evaluated
Market	Relevant, always included	The most important risk factors, Unable to meet customer needs, - Demand increase for low carbon products - Carbon border adjustment
Reputation	Relevant, always included	Decrease in the interest and trust of our stakeholders
Acute physical	Not evaluated	Not yet evaluated
Chronic physical	Relevant, always included	Increased temperature and rainfall irregularity can cause our operational expenses to increase.
Upstream	Not evaluated	Not yet evaluated
Downstream	Not evaluated	Not yet evaluated

**C2.2d**

**(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.**

We manage the risks according to the qualitative and quantitative effects. Opportunities are managed in the same manner by the Business Strategy unit. The quantitative one are represented as an expected value in monetary figures. Qualitative effects are managed according to the severity and probability of occurrence.

Our procedure is in compliance with the HeidelbergCement Risk Management Guidelines. The risks and opportunities are presented to Risk Committee every two months, to HC (QMM risks) and Sabancı (compliance risks) every quarter. Akçansa applies Group's risk catalogue which considers financial, strategic, operational, legal and compliance risks.

Climate change related risks include sales and market risk, substitution of products, volatility of energy and raw material prices, availability of raw materials and additives, environmental regulatory risks, sustainability and compliance risks. Thresholds are established by the individual countries, taking into account their specific circumstances. According to the Group's risk model and the defined risk category, the risks are assessed with reference to a minimum probability of occurrence of 10% and their potential extent of damage on key parameters.

Opportunities are assessed based on their positive impact on the same key parameters. These are used as a benchmark and include operating income, profit after tax, and cash flow. They are prioritized in the quarterly management meetings, where the Managing Board and country managers discuss and determine appropriate measures. The Managing Board and country managers will be supported in the future by specific risk management working groups for the clarification of specific issues and exchange of information. With regard to climate change related risks and opportunities the substitution of raw materials, increased use of alternative fuels, the development of alternative binder concepts and special products have been identified as priority areas.

**C2.3**

**(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?**

Yes

**C2.3a**

**(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.**

**Identifier**

Risk 1

**Where in the value chain does the risk driver occur?**

Direct operations

**Risk type**

Transition risk

**Primary climate-related risk driver**

Policy and legal: Increased pricing of GHG emissions

**Type of financial impact driver**

Policy and legal: Increased operating costs (e.g., higher compliance costs, increased insurance premiums)

**Company- specific description**

Paris Climate Agreement might create further limitations due to Turkey INDCs - Intended Nationally Determined Contributions. Akçansa plants should comply with all emission limits to be issued in the regulations. In Turkey there is no regulation or requirement for ETS. The ministry has been working on still capacity building and impact analysis (PMR Project). In case and ETS system is in place cap and trade schemes bear the potential risk to buy emission allowances in case there is no exemption rule applicable or production volumes exceed free allocation. The magnitude of risk is mainly depending on the market price for allowances, the volume of free allocation and our cement production volume.

**Time horizon**

Medium-term

**Likelihood**

Likely

**Magnitude of impact**

Medium-low

**Potential financial impact**

**Explanation of financial impact**

It may result in the decrease in production capacity and profit/revenue. Additional investments.

**Management method**

- The management of these risks is integrated into our multidisciplinary companywide risk management processes. The risk minimization is also supported with policy engagement activities. - Contribution in correct calculation of GHG reduction capacities - Lobbying in regulations which will ensure higher accessibility of low carbon and/or biomass type alternative fuels in the market, which will substitute fossil fuels. - The investments are done and planned for low carbon operation.

**Cost of management**

**Comment**

- Human resource cost - R&D cost - Energy efficiency projects

## C2.5

**(C2.5) Describe where and how the identified risks and opportunities have impacted your business.**

	Impact	Description
Products and services	Impacted	In terms of humidity, physical quality of raw material decreasing and leading to clogging in crushers
Supply chain and/or value chain	Impacted	Heavy rainfall causes difficulties in quarrying and transportation
Adaptation and mitigation activities	Not impacted	
Investment in R&D	Not impacted	
Operations	Impacted	In Ladik Plant, due to water scarcity in a few year ago, production stopped and water was brought from a farther source.
Other, please specify	Please select	

## C2.6

**(C2.6) Describe where and how the identified risks and opportunities have factored into your financial planning process.**

	Relevance	Description
Revenues	Not evaluated	
Operating costs	Not evaluated	
Capital expenditures / capital allocation	Not yet impacted	A new regulation on carbon pricing (Tax or ETS) is expected to enact in 3-5 years. This will bring about new investments to utilize more alternative fuels.
Acquisitions and divestments	Not evaluated	
Access to capital	Not evaluated	
Assets	Not evaluated	
Liabilities	Not yet impacted	As carbon pricing (Tax or ETS) regulation is under process the regulative liability of company will increase to comply with regulation.
Other	Not evaluated	

## C3. Business Strategy

### C3.1

**(C3.1) Are climate-related issues integrated into your business strategy?**

Yes

### C3.1a

**(C3.1a) Does your organization use climate-related scenario analysis to inform your business strategy?**

No, but we anticipate doing so in the next two years

C-AC3.1b/C-CE3.1b/C-CH3.1b/C-CO3.1b/C-EU3.1b/C-FB3.1b/C-MM3.1b/C-OG3.1b/C-PF3.1b/C-ST3.1b/C-TO3.1b/C-TS3.1b)

**(C-AC3.1b/C-CE3.1b/C-CH3.1b/C-CO3.1b/C-EU3.1b/C-FB3.1b/C-MM3.1b/C-OG3.1b/C-PF3.1b/C-ST3.1b/C-TO3.1b/C-TS3.1b) Indicate whether your organization has developed a low-carbon transition plan to support the long-term business strategy.**

Yes

### C3.1c

**(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.**

Climate change influences cement business in many ways. The most critical issue is carbon management. The CO2 emission is unavoidable consequence of decarbonization of limestone, simply the main raw material in clinker with around %75 rate in raw mix, and combustion of fuels in the kiln. The former constitutes 60% and latter 40% of CO2 emissions.

The business strategy firstly focuses on increasing the rate of alternative fuels in the kiln to substitute fossil fuels. Akçansa has clear alternative fuel rate and reduction of specific CO2 emission ambitions for year 2020. Used tyres, municipal waste, sewage sludge and waste oil are the main alternative fuel sources available in the market recently. The access to these sources mostly depends on the market conditions and availability changes from time to time, but the company strategy on the issue is definite. Plants have shifted to use more alternative fuels to substitute fossil fuels. New sources are under research.

Another issue is the water management. Since the rain regime has been changed abruptly the access to water is directly influenced, that is water shortage has become a problem to tackle. It is for sure that rain harvesting should be done in cement plants, today 2 plants have completed investments for rain water. Water recycling became one of the most critical development areas in 3 cement plants of Akçansa in the last 5 years and recycling ponds have been invested to manage the surface water. Moreover, all water wells have been mounted with flowmeters to measure the water withdrawn. Water flow diagrams for plants have been prepared and all water use is measured by flowmeters which enabled to routinely follow up water consumption that helps improve water management. On monthly basis the water data is reported to top management.

And the last thing is the energy efficiency & energy management. Electricity accounts for one of the biggest CO2 emissions. Using alternative energy sources and renewable energy is the way to decrease emissions in this area. Waste hot kiln gas is used (in Çanakkale Plant) to produce energy via waste heat power plant. In that way CO2 emission has been diminished seriously. In addition wind source has been under investigation in Çanakkale region for two years, since the results are positive the investment of the first wind turbine has been initiated. More will be invested in coming years.

Increasing the clinker rate in cement becomes a part of business strategy despite it is largely influenced and shaped by the market demand. Using CEM-II type blended cement rather than CEM-I in ready mixed concrete products benefits very much in diminishing CO2 emissions.

Finally land degradation is another issue that should be considered to combat climate change. Akçansa has a clear strategy and 2020 ambitions to rehabilitate the mining sites that serve natural resources for raw material. This enables the extraction sites to return into a new ecosystem where fauna and flora diversity are recreated.

Akçansa with this clear strategy target to create leadership and awareness in the construction materials market and cement market in Turkey.

Cement business is an energy intensive industry. Use of fossil fuels and electricity lead to the business being one of the top carbon emitters.

In our low-carbon transition plan mainly 3 issues are in the agenda:

First, substitution of fossil fuels with so called "alternative fuels" is a very big opportunity for the industry. This has been the most critical issue in transition to low carbon economy. Our Plants utilize sewage sludge, shredded tyres and RDF as alternative fuels. The target is to rise the amount in coming years.

Second, decrease of clinker rate in cement is another occasion to mitigate carbon emission. We aim to use more mineral additives and other cementitious by-products like blast furnace slag in cement, so that, use of clinker will dependently go down.

And thirdly, we are going to keep tracking feasibility to invest renewables. One wind turbine was invested in 2016 in Çanakkale Plant that produces 1,8% of electricity needed. This project can be enlarged next years.

**C3.1g**

**(C3.1g) Why does your organization not use climate-related scenario analysis to inform your business strategy?**

A detailed scenario analysis is planned.

**C4. Targets and performance**

**C4.1**

**(C4.1) Did you have an emissions target that was active in the reporting year?**

Intensity target

#### C4.1b

(C4.1b) Provide details of your emissions intensity target(s) and progress made against those target(s).

**Target reference number**

Int 1

**Scope**

Scope 1

**% emissions in Scope**

100

**% reduction from baseline year**

5.36

**Metric**

**Comment****C4.3c****(C4.3c) What methods do you use to drive investment in emissions reduction activities?**

Method	Comment
Dedicated budget for energy efficiency	Several energy saving gaps have been determined, accordingly necessary budget for heat and electrical energy optimization projects are planned for each plant.
Dedicated budget for low-carbon product R&D	Low carbon products both in cement and ready-mixed business line are developed, necessary budgeting is planned for the R&D projects and or necessary revisions in the existing production systems.
Partnering with governments on technology development	Cooperation with institutes and governmental bodies to develop innovative concrete products, to study use mineralizer to optimize calorific energy need and to enhance cement product resistance. This will bring considerable clinker savings, thus process CO2 will be minimized.
Employee engagement	The employees performance is evaluated and awarded by the success of the key performance indicators like energy efficiency, AFR, clinker/cement ratio targets resulting in CO2 reduction

**C4.5****(C4.5) Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?**

Yes

**C4.5a****(C4.5a) Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.****Level of aggregation**

Product

**Description of product/Group of products**

Green Concrete (A+Beton, Yeşilşap) Low clinker - cement

**Are these low-carbon product(s) or do they enable avoided emissions?**

Low-carbon product

**Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions**

Climate Bonds Taxonomy

**% revenue from low carbon product(s) in the reporting year**

25

**Comment**

A+Beton is a durable and high performing concrete product with a significantly reduced CO2 emission value due to the use of blast furnace slag for up to 70% in its composition, and is developed for environmentally friendly green buildings. Yeşilşap, an environmentally friendly and light ready screed product, reduces CO2 emission by up to 35% through special additive blend cements used in its production process. Due to the special chemical additives used, Yeşilşap weighs 25% less when compared with conventional screed products and also contributes to thermal insulation on buildings.

## C-CE4.9

(C-CE4.9) Disclose your organization's best available techniques as a percentage of Portland cement clinker production capacity.

	Total production capacity coverage (%)
4+ cyclone preheating	100
Pre-calciner	77

## C5. Emissions methodology

### C5.1

(C5.1) Provide your base year and base year emissions (Scopes 1 and 2).

#### Scope 1

**Base year start**

January 1 2010

**Base year end**

December 31 2010

**Base year emissions (metric tons CO2e)**

5872720

**Comment**

#### Scope 2 (location-based)

**Base year start**

January 1 2010

**Base year end**

December 31 2010

**Base year emissions (metric tons CO2e)**

338163

**Comment**

#### Scope 2 (market-based)

**Base year start**

January 1 2010

**Base year end**

December 31 2010

**Comment**

### C5.2

(C5.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate Scope 1 and Scope 2 emissions.

WBCSD: The Cement CO2 and Energy Protocol

## C6. Emissions data

### C6.1

(C6.1) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

**Row 1**

**Gross global Scope 1 emissions (metric tons CO2e)**

6052352

**End-year of reporting period**

<Not Applicable>

**Comment**

## C6.2

---

### (C6.2) Describe your organization's approach to reporting Scope 2 emissions.

#### Row 1

##### Scope 2, location-based

We are reporting a Scope 2, location-based figure

##### Scope 2, market-based

We have no operations where we are able to access electricity supplier emission factors or residual emissions factors and are unable to report a Scope 2, market-based figure

##### Comment

## C6.3

---

### (C6.3) What were your organization's gross global Scope 2 emissions in metric tons CO<sub>2</sub>e?

#### Row 1

##### Scope 2, location-based

272269

##### Scope 2, market-based (if applicable)

<Not Applicable>

##### End-year of reporting period

<Not Applicable>

##### Comment

## C6.4

---

### (C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

Yes

## C6.4a

---

### (C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

#### Source

Ready mix concrete plants and aggregate plants are not included

#### Relevance of Scope 1 emissions from this source

No emissions from this source

#### Relevance of location-based Scope 2 emissions from this source

Emissions are not relevant

#### Relevance of market-based Scope 2 emissions from this source (if applicable)

Please select

#### Explain why the source is excluded

This source does not emit Scope 1 emission, only Scope 2. Scope 2 (indirect energy use) is relatively very low compared to cement plants

---

## C6.5

---

### (C6.5) Account for your organization's Scope 3 emissions, disclosing and explaining any exclusions.

#### Purchased goods and services

##### Evaluation status

Relevant, calculated

##### Metric tonnes CO<sub>2</sub>e

14365.22

##### Emissions calculation methodology

Fuel consumption data is gathered, and IPCC diesel emission factor (unit, kg CO<sub>2</sub>/GJ) is used to calculate CO<sub>2</sub> emission.

##### Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

##### Explanation

Calculation includes consumption of fuel consumed for extraction, production, and transportation (from the quarry to cement plants) of raw materials

---

### Explanation

## Fuel-and-energy-related activities (not included in Scope 1 or 2)

### Evaluation status

Not relevant, calculated

### Metric tonnes CO2e

1357.56

### Emissions calculation methodology

DEFRA emission factor (unit, kg CO2/km) is used to calculate CO2 emission.

Percentage of emissions calculated using data obtained from suppliers or value chain partners

### Explanation

The transport of fuels has been included in the calculation.

## Upstream transportation and distribution

### Evaluation status

Not relevant, calculated

### Metric tonnes CO2e

5749.72

### Emissions calculation methodology

DEFRA emission factor (unit, kg CO2/km) is used to calculate CO2 emission.

Percentage of emissions calculated using data obtained from suppliers or value chain partners

### Explanation

The transport of raw materials which come from tier 1 suppliers has been included in the calculation

## Waste generated in operations

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

### Emissions calculation methodology

Percentage of emissions calculated using data obtained from suppliers or value chain partners

### Explanation

Most of the waste generated in the plants are co-incinerated in the cement plant itself, therefore waste related CO2 is negligible.

## Business travel

### Evaluation status

Not relevant, calculated

### Metric tonnes CO2e

655.27

### Emissions calculation methodology

Myclimate website for flights

Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

### Explanation

All flights have been taken into calculation.

## Employee commuting

### Evaluation status

Not relevant, calculated

### Metric tonnes CO2e

C8.2e

---

**(C8.2e) Provide details on the electricity, heat, steam, and cooling your organization has generated and consumed in the reporting year.**

	Total Gross generation (MWh)	Generation that is consumed by the organization (MWh)	Gross generation from renewable sources (MWh)	Generation from renewable sources that is consumed by the organization (MWh)
Electricity	100861.94	100861.94	6711.38	6711.38
Heat	0	0	0	0
Steam	0	0	0	0
Cooling	0	0	0	0

C-CE8.2e

**(C-CE8.2e) Provide details on the electricity and heat your organization has generated and consumed for cement production activities.**

	Total gross generation (MWh) inside the cement sector boundary	Generation that is consumed (MWh) inside the cement sector boundary
Electricity	100861.94	100861.94
Heat	0	0
Steam	0	0

C8.2f

**(C8.2f) Provide details on the electricity, heat, steam and/or cooling amounts that were accounted for at a low-carbon emission factor in the market-based Scope 2 figure reported in C6.3.**

**Basis for applying a low-carbon emission factor**

Off-grid energy consumption from an on-site installation or through a direct line to an off-site generator owned by another company

**Low-carbon technology type**

Wind

**MWh consumed associated with low-carbon electricity, heat, steam or cooling**

6711.38

**Emission factor (in units of metric tons CO2e per MWh)**

0

**Comment**

Our wind turbine capacity 2,35 MW and annually can produce 7.844 MWh This amount is equivalent to nearly 2% of the total electricity consumption of the our factory. Turbine has been working since september 2016.

C9. Additional metrics

C9.1

**(C9.1) Provide any additional climate-related metrics relevant to your business.**

C-CE9.3a

**(C-CE9.3a) Report your organization's split between white and grey cement production.**

	Percentage of total production (%)
White cement	
Grey cement	

C-CE9.3b

**(C-CE9.3b) Report your organization's clinker production and capacity percentage figures by kiln type.**

	Percentage of metric tons of clinker production (%)	Percentage of metric tons of clinker capacity (%)	Comment
Dry kiln			
Semi-dry kiln			
Semi-wet kiln			
Wet kiln			
Shaft kiln			
Long kiln			
Other			

**C-CE9.3c**

**(C-CE9.3c) Report your organization's cement-related production outputs and capacities by product.**

	Production (metric tons)	Capacity (metric tons)
Limestone		
Gypsum		
Clinker		
Cement equivalent		
Cementitious products		
Low-CO2 materials		
Lime		

**C-CE9.6**

**(C-CE9.6) Disclose your organization's low-carbon investments for cement production activities.**

**Investment start date**

December 1 2017

**Investment end date**

June 30 2018

**Investment area**

Property, plant and equipment

**Technology area**

Fuel switching

**Investment maturity**

Large scale commercial deployment

**Investment figure**

2036000

**Low-carbon investment percentage**

0 - 20%

**Please explain**

This investment enables Canakkale PLant to utilise more shredded tyres as alternative fuel substituting coal to burn in kilns. The result is emitting low carbon in cement production.

---

**Investment start date**

June 4 2015

**Investment end date**

December 29 2016

**Investment area**

Property, plant and equipment

**Technology area**

Other, please specify (Renewable energy (Wind Turbine))

**Investment maturity**

Large scale commercial deployment

**Investment figure**

8932000

**Low-carbon investment percentage**

0 - 20%

**Please explain**

The wind turbine investment, as the first one in Turkish cement industry, provides the Plant to produce electricity from renewable and clean source. The turbine supplies 1,8% of total energy need of Plant.

---

**Investment start date**

March 3 2015

**Investment end date**

September 10 2015

**Investment area**

Property, plant and equipment

**Technology area**

Carbon capture and storage (CCS)

**Investment maturity**

Applied research and development

**Investment figure**

500000

**Low-carbon investment percentage**

0 - 20%

**Please explain**

This R&D project has been developed with academicians in Canakkale University. The aim is to produce Microalgae with the help of kiln exhaust gases, mainly the CO2. This is a CCS project clearly having a potential to mitigate CO2 emissions.

---

**C10. Verification**

---

**C10.1**

---

**(C10.1) Indicate the verification/assurance status that applies to your reported emissions.**

	Verification/assurance status
Scope 1	No third-party verification or assurance
Scope 2 (location-based or market-based)	No third-party verification or assurance
Scope 3	No third-party verification or assurance

## C10.2

---

**(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?**

No, we do not verify any other climate-related information reported in our CDP disclosure

## C11. Carbon pricing

---

### C11.1

---

**(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?**

No, but we anticipate being regulated in the next three years

### C11.1d

---

**(C11.1d) What is your strategy for complying with the systems in which you participate or anticipate participating?**

As we have in our policy, strategy and vision, we are working for low carbon production by ensuring energy efficiency, increasing the use of alternative raw materials and alternative fuel.

In addition, Actively participate with policy engagement activities. E.g. the PMR Turkey (Partnership for Market Readiness) Project. Specifically, Turkey seeks the PMR's help in realizing its vision for market-based mechanisms to mitigate GHG.

### C11.2

---

**(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?**

No

### C11.3

---

**(C11.3) Does your organization use an internal price on carbon?**

No, and we do not currently anticipate doing so in the next two years

## C12. Engagement

---

### C12.1

---

**(C12.1) Do you engage with your value chain on climate-related issues?**

Yes, our suppliers

Yes, other partners in the value chain

### C12.1a

---

**(C12.1a) Provide details of your climate-related supplier engagement strategy.**

**Type of engagement**

Engagement & incentivization (changing supplier behavior)

**Details of engagement**

Run an engagement campaign to educate suppliers about climate change

**% of suppliers by number**

**% total procurement spend (direct and indirect)**

**% Scope 3 emissions as reported in C6.5**

**Rationale for the coverage of your engagement**

**Impact of engagement, including measures of success**

**Comment**

We give sustainability training to our suppliers at Büyükçekmece plant.

**C12.1c**

**(C12.1c) Give details of your climate-related engagement strategy with other partners in the value chain.**

As prior opportunity in combatting climate change we contact tol ocak municipalities for utilization of sewage sludge as an alternative fuel. The based example is the engagement with İstanbul municipality water affairs (ISKI) THE DRIED sewage sludge from biological treatment plants directly supplied to our cement plant in İstanbul. The utilization rate has been increasing in years.

**C12.3**

**(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?**

Direct engagement with policy makers

Other

**C12.3a**

**(C12.3a) On what issues have you been engaging directly with policy makers?**

Focus of legislation	Corporate position	Details of engagement	Proposed legislative solution
Mandatory carbon reporting	Support with major exceptions	Akçansa engages in contributing in the issuance of mandatory carbon reporting regulation which includes cement industry emission reporting. Akçansa environmental department contributes in the preparation of the content of the reporting guideline, to ensure cement industry calculates and report in a correct method.	Based on, the Turkish MRV regulation, verification process has been started for 2015 and 2016 reports.
Cap and trade	Neutral	Turkey profits from a World Bank funding on Carbon Market Readiness Partnership program (PMR). Akçansa support the Ministry of Environment and Urbanism on the implementation of this pilot program	PMR Project has not been finalized yet
Energy efficiency	Support with minor exceptions	Akçansa support the energy efficiency policy, and position itself in leveraging the industry by promoting the best practices at public speeches and seminars.	There are energy efficiency related regulations, no further proposal yet.

**C12.3e**

**(C12.3e) Provide details of the other engagement activities that you undertake.**

Akçansa is closely working with the universities (ITU, Sabancı University) and R&D institute TUBITAK to create and to optimize low carbon product and resource efficiency solutions.

In Çanakkale plant a pilot project named "Microalgae" has been developed in cooperation with "Çanakkale 18 Mart University" academicians. The project has been initiated with the laboratory studies and the pilot implementation has been invested in Akçansa Çanakkale Plant. The algae cultures grown in the lab conditions are put in the ponds and then feed with the hot gas directly taken from the kiln stacks. The CO<sub>2</sub> in the gas flu feeds the algae until they become well stressed to harvest. The harvested microalgae are dried out and become a product as alternative fuel, or used in salmon fishery and cosmetics industry. This pilot project proves kiln hot gas (containing CO<sub>2</sub>) can be used to produce microalgae and to decrease CO<sub>2</sub> emissions from combustion .

We are involved in working groups and projects on climate change and sustainability issues.

- ÇEVKO (Environmental protection foundation - sustainability and climate change working group)
- WBCSD Turkey (Circular economy, water and sustainability reporting working groups).
- TUSIAD (the Turkish Industry and Business Association - Environmental and sustainability working group)

We give opinions in the regulations changes, lobbying activities in relevant authorities develop projects and involve in projects, work to raise awareness and knowledge about climate change and sustainability, and support the public through working groups for COPs.

For example, we have been involved in a project named The Materials Marketplace, initiated by WBCSD Turkey, which aims company-to-company industrial reuse and contribute to the "circular economy". There is a cloud-based platform and traditional and non-traditional industrial waste streams are matched with companies' need.

This project leads to minimize waste that sent to landfills, save the energy and mitigate natural resource using.

We aim to minimize our impact on climate change and contribute to environment by using new alternative raw materials and fuels.

---

**C12.3f**

**(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?**

Akçansa puts 2020 sustainability ambitions which covers CO<sub>2</sub> reduction, low carbon product, Environmental Product Declaration targets, which provide clear direction for the activities. Executive committee and the sustainability committee periodically check the progress. The results are shared with the stakeholders through sustainability report available on Akçansa web site. Additionally, all personal targets available in the scorecards are connected to the corporate sustainability targets.

CO<sub>2</sub> emissions are calculated and reported regularly to top management as well as HeidelbergCement. In 2015, the annual GHG emission plans have been issued to Ministry of Environment and the annual emissions are verified and reported to the ministry as well.

---

**C12.4**

**(C12.4) Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).**

**Publication**

In voluntary sustainability report

**Status**

Underway – previous year attached

**Attach the document**

AKÇANSA SUSTAINABILITY REPORT 2014 -2015.pdf

**Content elements**

Governance  
Strategy  
Risks & opportunities  
Emissions figures  
Emission targets  
Other metrics

---
